

# 2013 New England Tree Fruit Management Guide

Vanier is a Japanese-type plum from a Wickson x Burbank cross, released from the University of Guelph in Vineland, Ontario in 1984. This mid-season variety has red skin and yellow flesh, large size, and good flavor.

# 2013 New England Tree Fruit Management Guide

---

This guide has been adapted from the Cornell University Cooperative Extension publication “2013 Pest Management Guidelines for Commercial Tree-Fruit Production.” It is a joint project between the New England Extension faculty and professionals and Cornell University to provide the best information available for the management of commercial tree fruit in the region. Original material was largely written by the Cornell faculty and staff listed below and edited by New England personnel. Final content approval for this guide is the responsibility of the New England contributors.

Every effort has been made to provide correct, complete, and up-to-date pest management information for the New England states at the time this publication was released for printing (January 2013). It is the responsibility of individuals using this guide to insure that they use pesticides in a manner that is consistent with Federal and state regulations.

Trade names used herein are for convenience only. No endorsement of products is intended, nor is criticism of unnamed products implied.

**These guidelines are not a substitute for pesticide labeling. Always read the product label before applying any pesticide.**

## **New England Edition Contributors**

Daniel R. Cooley, Wesley R. Autio, Duane Greene, and Jon Clements – University of Massachusetts Amherst  
Lorraine M. Los and Mary Concklin – University of Connecticut  
Lorraine P. Berkett, Terence L. Bradshaw and Morgan C. Griffith – University of Vermont  
Heather H. Faubert – University of Rhode Island  
Glen Koehler and Renae Moran – University of Maine

## **Cornell Edition Contributors**
